Succeeding by 'downloading resources'

Learning about clients' operations, needs is high priority for Methods Machinery Co.

By Angelica Semler News-Herald Business Writer

When a telephone call becomes an interruption, the company has grown too large and the relationship with customers

is suffering.

Robert Mlakar's father founded and grew Methods Machinery Co. Inc. with that philosophy. Mlakar, president and chief executive officer of the Cleveland company, has since adopted that belief.

"My dad believed that you are only as big as the service you could give," Mlakar said. "The point being that if you ever get bigger than your ability to respond to customer needs, you start losing touch with the

business."

Methods Machinery represents and markets products for machine tool builders and technological developers.

The company handles clients from four business segments — metal stamping, tool and die and mold making, production machinery and rapid prototyp-

ing and manufacturing.

"We act as a sales agency for them," Mlakar said. "We utilize their engineering people. We utilize their applications and their applied research people, their systems designers and their electronics engineers. We look at our job as downloading resources."

Since Mlakar succeeded his father in 1986, Methods Machinery has acquired Machine Tool Corp. in Indianapolis. Wing & Jabaay Inc. in Michigan has joined Methods Machinery as a strategic partner.

These are in addition to Excel 2000, a Georgia-based company Mlakar started in 1980.

In 1994, the conglomerate founded Intercore Group, a provider of support services such as machinery installation, maintenance and operator training. Mlakar describes it as the um-

Methods Machinery Co. Inc. President Robert Mlakar: "We believe we're in business because of what comes to us from outside of our company and how well we respond to those opportunities."

Methods Machinery represents and markets products for machine tool builders and technological developers. The company handles clients from four business segments — metal stamping, tool and die and mold making, production machinery and rapid prototyping and manufacturing.

Mlakar has a separate business card for each company.

Although it may seem odd that the companies, which are in the same business, operate as separate entities, Mlakar said a meeting of sales representatives

and what they learned from one another was too valuable to chance losing in a merger of the five companies, Mlakar said.

While maintaining independence on that side of the business, relationships between cli-

suppliers and walk directly int our office, you shouldn't be able to tell the difference," he said. "Everything about the way we run our business should be consistent with the people that we represent."

Methods Machinery achieve this by learning how clients ru their businesses — from study ing their objectives, strength and weaknesses to involving both companies in planning and

Methods Machinery also mu analyze clients before agreeir to represent them, Mlakar said

"We really believe that we should be an outside-in company instead of an inside-ocompany," Mlakar said. "We believe we're in business because of what comes to us froo outside of our company are how well we respond to thoso opportunities."

Mlakar believes the comp ny's long-standing relationshi and loyalty to customers ha kept it in business for 40 year Some clients started with Met ods Machinery in 1955, Mlak said.

A close relationship with oparticular client may catap Methods Machinery into the ture.

3D Systems, a Californ company Methods Machine represents, has developed rapid prototyping technolo that utilizes computer-aided computer aided computer and plastics molds.

The process eliminates a currently expensive and time-cosuming model-making meth with applications in the aumotive, aerospace and medicindustries.

There will soon be a \$2 b lion to \$3 billion market f such technology, said Bill Heington, vice president operations for Methods Machiery.

Rapid prototyping fits right with Methods Machinery's ture plans to succeed throu representing technologically a vanced companies, Heringt said. He was a former employ at 3D Systems — a leader rapid prototyping — and join
